

Dentsply Sirona Treatment Centers: The difference is in the interaction

Dentsply Sirona treatment centers are designed for perfection. The interaction of all functional details makes the difference. The workflows are efficient and ensure pleasant comfort. The diverse product models that can each be individually configured satisfy a wide range of demands. The innovations presented at the IDS 2017 support treatment in many ways.

Bensheim/Salzburg, March 21, 2017. Whether the market launch of the LEDview Plus operating light – which has now won several awards – or the presentation of the innovative Turn function in the Intego pro treatment center – which allows both right-handed and left-handed dentists to treat equally ergonomically – the modern treatment centers from Dentsply Sirona Treatment Centers have undergone extensive development in the past months. The primary goal of these efforts was and is to optimize work processes in dentistry. This is achieved with a well-planned design, optimal ergonomics, and suitable functionality for every kind of dental treatment.

Teneo – Premium class

For the premium treatment center Teneo, Dentsply Sirona Treatment Centers presents an enhanced development of the integrated implantology function at the IDS. A significant advantage is the optimization of the workflow. The integrated implant database ensures safety, as complicated manual settings are eliminated and data is coordinated with the respective manufacturers; this is especially helpful for dentists who have just started implantology. The newly developed implantology plugin for Sidexis allows for the most important parameters to be displayed on the treatment center monitor. This means that the dentist does not need to turn around during treatment and has all essential parameters in view – this function is further optimized by the option of controlling using the foot control. The option of adapting the instrument hose at the side of the dentist element simplifies quick and sterile preparation for implantology treatment. Hose sleeves are also easy to attach and the implant motor can be easily placed on the dentist element. This makes Teneo an absolute "implantology expert." But of course, Teneo also sets new standards in high-quality esthetics: The popular lounge upholstery in neutral black is presented for the first time in an elegant sporty look with red stitching. The treatment center as a visual eye-catcher gives the treatment room a very special note.

Sinius, the compact treatment center for general dentists

The proven Sinus treatment center has new integrated functions that make it a generalist for dental treatment. Dentists can rely on its integrated endodontics and implantology functions. The enhancement of the established endodontics function includes, among other things, an

About Dentsply Sirona:

Dentsply Sirona is the world's largest manufacturer of professional dental products and technologies, with a 130-year history of innovation and service to the dental industry and patients worldwide. Dentsply Sirona develops, manufactures, and markets a comprehensive solutions offering including dental and oral health products as well as other consumable medical devices under a strong portfolio of world class brands. As The Dental Solutions Company™, Dentsply Sirona's products provide innovative, high-quality and effective solutions to advance patient care and deliver better, safer and faster dentistry. Dentsply Sirona's global headquarters is located in York, Pennsylvania, and the international headquarters is based in Salzburg, Austria. The company's shares are listed in the United States on NASDAQ under the symbol XRAY. Visit www.dentsplysirona.com for more information about Dentsply Sirona and its products.

endo contra-angle handpiece with light that ensures a better view of the treatment area. An extensive file library that also includes reciprocal file systems from Dentsply Sirona Endodontics ensures the desired scope of treatment. The implantology function gives users an easy start into integrated implantology. The most important parameters are displayed on the EasyTouch user interface.

Maximum flexibility with Intego pro

Intego pro, on the other hand, is a treatment center that leaves hardly anything to be desired regarding flexibility. It can be equipped depending on the needs of the practice and features an ergonomic design. The new Turn option ensures the necessary flexibility, especially in practices with multiple dentists. This treatment center can be "converted" in just 15 seconds thanks to an intelligent swivel mechanism. In just a few easy steps, a right-handed center can be transformed into a left-handed center and vice versa. Intego pro is very versatile: The treatment center complies with the requirements of a modern practice with selected materials and perceptibly smooth movement. It can also be upgraded, as it has interfaces with integrated functions.

"A treatment center today is more than just a chair that provides a dentist with access while the patient lies comfortably," summarizes Susanne Schmidinger, Head of Product Management at Dentsply Sirona Treatment Centers. "It can also be integrated into almost any practice network and has many additional functions, for example, for implantology and endodontics. With our developments, we want to ensure that dentists can treat their patients in a perfectly coordinated workflow and offer them faster, safer, and better dental treatment."

Design trends 2017/18 at IDS

At the Dentsply Sirona Treatment Centers stand in Hall 10.2 at the IDS in Cologne, visitors can expect to be inspired. "We are looking forward to showing that the design of the treatment center and treatment room has a strong influence on the dentist's work and the patient's comfort," says Susanne Schmidinger. "With the new trends that we researched around the world for Dentsply Sirona customers, we again want to present new possibilities for workflow and design in the practice at the IDS. Interested visitors can also obtain the IDS edition of the Dentsply Sirona Treatment Centers Design Magazine at our stand."

Due to various certification and registration periods, not all products are immediately available in all countries.
